

South Bay Technology Week Celebration

Monday, January 23, 2006
The Girvan Institute of Technology

Xerox Center
101 Continental Blvd.
El Segundo, CA

Registration and hosted
networking 7:30 a.m.

Conference Program
8:30 a.m. – 11:30 a.m.

This is a no cost event
HOWEVER
reservations are required.

You must attend if you are
responsible for:

- Intellectual property
- Technology transfer and commercialization
- Research and development
- Product development
- Businesss experiencing or anticipating disruptive change
- Investing in emerging growth businesses

Sponsored by

CA Mfg Technology Consulting

Girvan Institute

South Bay Partnership

Information 310-792-0323

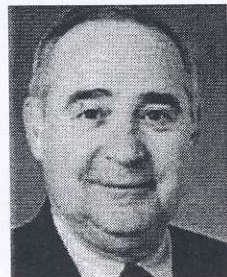

Registration via email:

MEET AND HEAR

Steve Wozniak, Apple co-founder and current President and CTO World of Zeus.

Dr. Adel Ghanem, World of Zeus CEO

Lt. Gen. (Ret.) Eugene Tattini, Deputy Director, Jet Propulsion Laboratory.

A South Bay Technology Community Panel Discussion

featuring:

The Aerospace Corporation, The Girvan Institute of Technology, ACE Clearwater Enterprises, and The Southern California Biomedical Council.

GPS technology was developed in the South Bay of Los Angeles County forty years ago. This is where the Pioneer *Able* space probe was developed. Here in the South Bay the nation's leading manufacturer of security and credit card data strips is located. It is here that the nation's leading scientists and technologists delve into the mysteries of next generation space launch vehicles along with infectious disease, molecular medicine, endocrinology, medical genetics, and pediatric allergy and immunology.

This dynamic economic region along the California coast is known worldwide for the Beach Boys' surfer music. It's where leading television series are produced, and international volleyball tournaments are staged just walking distance from science and technology hubs satisfying national security, space exploration, next generation manufacturing innovation and bioscience demands.

This conference explores how South Bay technology finds its way into many industries' applications and is licensed by wealth creating companies. Attendees learn how companies tap into the wealth of technology hidden inside aerospace and defense companies. They hear how some aerospace and defense companies use intellectual property to create new enterprise value. They learn about a new industry collective that is accelerating the deployment of technology in new and exciting ways.
